

Aotearoa New Zealand Sample IQN OSCE

REGISTERED NURSE

Candidate Instructions

Practice Setting: You are a registered nurse working a morning shift in a general practice clinic.

Handover Information	
Identification	Your patient is John Dory, a 23-year-old, New Zealand European, male. Date of birth: 25-12-2000, National Health Index (NHI): IQN111
Situation	John has recently returned to Aotearoa New Zealand after studying overseas. He has recently been diagnosed with asthma and has been prescribed a salbutamol (Ventolin) inhaler.
Background	He has a history of allergic rhinitis, eczema, and hay fever. John has reported a family history of asthma, indicating that both parents have been diagnosed with the condition and are currently on inhalers.
Assessment	Another nurse has already taken John's vital signs, which are all within normal range.
Recommendation	Provide patient education on asthma management, including using an inhaler with a spacer.

You will be assessed on your ability to:

- a. provide patient education.

Note:

- For this scenario, you are NOT required to retake the patient's vital signs.
- A copy of John's most recent vital signs is attached.

----- End of Candidate Instructions -----

This form is exclusively intended for New Zealand IQN OSCE purposes.
